Witch of the Year!

Goblins, children and parents who attended the Halloween party at the Appomattox Primary School on October 25th had an opportunity to throw sponges at principal, Mrs. pat Torrence; Division Superintendent, Lloyd Walton; and several teachers.

The money raising project sponsored by the PTA was another success. Children adults enjoyed cake walks, bingo, haunted houses, and costume judging when senior citizens volunteered their services. The PTA would like to thank merchants, parents and all who donated so generously to make the project a success.

Vera Church Of God Plans Youth Center

The Vera Church of God, located six miles East of Appomattox on Route 24, is planning to utilize the Vera School Building for a Youth Center.

The building will be open on a weekly basis with adult supervision for the youth to play ping pong, air hockey, and other games.

The help of good Christian friends who really have a concern for our young people is needed. Your cash donations to get this project started will be appreciated. Also needed is a good used refrigerator to keep soft drinks in for the youth.

Anyone wishing to help on this project can call Leon Bryant, 352-5142, or write to Vera Church of God, Route 1, Box 217, Spout Spring, Va.

IMPORTED FIRE ANTS INFESTING BUILDINGS

Imported fire ants, a scourge on farms, in parks and other outdoor areas of the South for years, are now found to be infesting buildings, according to U.S. Department of Agriculture entomologists.

Infestations have been found in buildings in Savannah, Ga., and in Gainesville, Fla., and indications are that they may infest any building where temperature and humidity are favorable and a water supply is available.

The nest found in the Savannah buildings contained no evidence of reproduction or brood indicating the formation of the nests was still in process when discovered and eliminated. However, one nest found in a Gainesville building did contain a reproducing colony, reasonable proof that fire ants can live and thrive indoors.

Although the infestations are few in number, farmers, county agents, extension workers and entromologists should be alert for fire ants in buildings and consider appropriate strategies to eliminate them.
